ASSIGNMENT 1

This assignment focuses on managing user accounts and monitoring system performance on Windows Server. The tasks include creating user accounts, configuring password and lockout policies, and using system monitoring tools such as Task Manager, Performance Monitor, Event Viewer, and Resource Monitor.

1.Create Local and Domain Users

To create a domain user:
Go to → Server Manager → Tools → Active Directory Users and Computers → Domain → Users → Right-click → New → User → Enter details → Set password → Finish.

2.Configuring Password Policies

Go to → Server Manager → Tools → Group Policy Management → Default Domain Policy → Edit →
Computer Configuration → Policies → Windows Settings → Security Settings → Account Policies → Password Policy → Configure required settings.

3.Implement account lockout policies

Go to → Group Policy Management → Default Domain Policy → Edit →
Computer Configuration → Policies → Windows Settings → Security Settings → Account Policies → Account Lockout Policy → Configure threshold, duration, and reset time.

4. Use Task manager for user activity monitoring

Go to → Server Manager → Tools → Task Manager → View Users, Processes, and Performance.

5. Configure performance monitor

Go to → Server Manager → Tools → Performance Monitor → Data Collector Sets → User Defined → New → Data Collector Set → Add counters → Save and Start → View Reports.

6. Set Up Windows event log monitoring

Go to → Server Manager → Tools → Event Viewer → Windows Logs → Monitor Application, Security, and System logs.

7. Create Custom event log views

Go to → Event Viewer → Custom Views → Create Custom View → Select log type, event IDs, and filters → Save.

8.Use resource monitor for system performance tracking

Go to → Server Manager → Tools → Performance Monitor → Open Resource Monitor → Check CPU, Memory, Disk, and Network tabs.

ASSIGNMENT 2

NETWORK AND SECURITY CONFIGURATION

This assignment involves configuring network and security-related components in Windows Server. Tasks include NIC configuration, NIC teaming, routing, WSUS, firewall settings, printer services, and applying basic network security policies using Group Policy.

1.Configure network interface cards (NICs)

Go to → Server Manager → Local Server → Click Ethernet → Opens Network Connections → Right-click NIC → Properties → IPv4 → Assign static IP, subnet, gateway, DNS → Apply.

2. Set up NIC Teaming

Go to → Server Manager → Local Server → NIC Teaming (Disabled) → Click → Tasks → New Team → Select adapters → Create.

3. Configure IP Addressing and Routing

Go to → Server Manager → Manage → Add Roles and Features → Install Remote Access → Select Routing → Finish →
Go to → Tools → Routing and Remote Access → Configure and Enable → Custom Configuration → LAN Routing → Start service.

4. Install and configure Windows Update Services (WSUS)

Go to → Server Manager → Add Roles and Features → Select WSUS → WSUS Services + WID Database → Set content location → Install

5. Configure Windows Firewall

Go to → Server Manager → Tools → Windows Defender Firewall with Advanced Security → Inbound Rules → New Rule → Select Port/Custom → Configure rule → Save.

6. Setup Network Printer Services

Go to → Server Manager → Add Roles and Features → Print and Document Services → Print Server →
Go to → Tools → Print Management → Printers → Add Printer → Add TCP/IP or local printer → Install driver → Share.

7.Implement basic Network Security Policies
